

MADE IN U.S.A.  
WITH GLOBAL  
COMPONENTS

Rear view

This switch is compatible with the following Lowell models (order separately):

- #RPC-15-SCD-RJ Remote power control
- #RPC-20-SCD-RJ Remote power control

### features.

- **Description:** Single pole single throw, low voltage switch with maintained closure, for applications that only use one switch. The switch is connected to a remote power control (ordered separately) to activate equipment.
- **Closure:** Maintained closure
- **Activation:** Rocker switch
- **Status Indicators:** 1 LED (green) lights when unit is on.
- **Connections:** Rear connections are termination strips with wire capacity to 18-gauge. Also includes one RJ45 connector. *Note: The RJ45 connection is only compatible with Lowell remote power controls (RPC) with a single RJ45 connector and classic connections, not pass-through connections.*
- **Wall Plate:** Includes 1-gang decorator style wall plate (black plate/sub-plate).
  - The sub-plate can also be mounted in a 19" rackmount panel with suitable openings, in which case the outer plate would not be used. See Lowell panels #D3P-ID-1, #D3P-ID-2, #D8P-ID-3, #D9P-ID-3.
  - The sub-plate can also be used in multi-gang decorator style wall plates (by others), in which case the outer plate would not be used.
- **A&E Specifications:** The low voltage switch for remote activation of equipment shall be Lowell Model #RPSB-P-RJ, which shall operate in conjunction with a remote power control (ordered separately). The switch shall feature maintained closure, rear connection termination strips with wire capacity to 18-gauge, an RJ45 connector, black one-gang decorator style wall plate with an LED status indicator, and rocker activation switch.

### typical wiring

Maximum wire distances:  
 24-gauge: 20,000 ft. (approx. 3.5 miles)  
 22-gauge: 31,200 ft. (approx. 5.5 miles)  
 18-gauge: 76,800 ft. (approx. 13.5 miles)

### Understanding MAINTAINED vs. MOMENTARY Switches:

- Maintained Switch:** A switch with maintained closure stays in the position you select. When you turn it on, it stays on until you turn it off, and vice versa. An example would be a switch used for a ceiling light, which stays on until you flip the switch to the off position. Specify a maintained switch for applications that use only one switch to control the equipment.
- Momentary Switch:** A switch with momentary closure operates only as long as you press or hold it; the switch returns to its original position as soon as you stop. An example would be a switch for a doorbell, which continues to ring only while you press the switch. Specify momentary switches for applications that utilize more than one switch to control the equipment.
