- **Description:** Single pole single throw, low voltage switch with maintained closure, for applications that only use one switch. The switch is connected to a remote power control or sequencer (ordered separately) to activate equipment.
- **Closure:** Maintained closure
- **Activation:** KEY switch
- **Status Indicators:** 1 LED (green) lights when unit is on
- **Connections:** Rear connections are termination strips with wire capacity to 18-gauge.
- **Rackmount Panel:** The switch with black sub-plate is mounted to a 1U x 19" rackmount panel.
- **A&E Specifications:** The low voltage switch for remote activation of equipment shall be Lowell Model #RPSB-KR, which shall operate in conjunction with a power sequencer or remote power control (ordered separately). The switch shall feature maintained closure, rear connection termination strips with wire capacity to 18-gauge, an LED status indicator, and key activation switch. It shall be mounted in a 1U x 19" rackmount panel.

This switch is compatible with the following Lowell models (order separately):

Maximum wire distances:
 24-gauge: 20,000 ft. (approx. 3.5 miles)
 22-gauge: 31,200 ft. (approx. 5.5 miles)
 18-gauge: 76,800 ft. (approx. 13.5 miles)

Understanding MAINTAINED vs. MOMENTARY Switches:

- Maintained Switch:** A switch with maintained closure stays in the position you select. When you turn it on, it stays on until you turn it off, and vice versa. An example would be a switch used for a ceiling light, which stays on until you flip the switch to the off position. Specify a maintained switch for applications that use only one switch to control the equipment.
- Momentary Switch:** A switch with momentary closure operates only as long as you press or hold it; the switch returns to its original position as soon as you stop. An example would be a switch for a doorbell, which continues to ring only while you press the switch. Specify momentary switches for applications that utilize more than one switch to control the equipment.
